PERSONAL STATEMENT

As a passionate and results-driven software developer, I take pride in creating efficient, scalable, and user-focused solutions. I enjoy solving real-world problems through clean code and thoughtful design, always aiming to improve both performance and usability. My journey in software development is fueled by curiosity and a strong commitment to continuous learning.

SKILLS AND EXPERTISE

Spring Boot (Java)

1. Spring MVC design pattern,
2. Spring Data JPA and hibernates for working with database,
3. Spring security for authorization and authentication,
4. Familiar with how spring works under the hood for example spring auto-configuration, dependency injections and how Spring manage beans lifecycle
5. Middlewares implementation (Filters)

Laravel (Php)

1. Laravel MVC design pattern,
2. Eloquent ORM and migrations (Experienced in interacting with databases using Eloquent ORM for model relationships, eager/lazy loading),
3. Artisan command tools,
4. Familiar with Laravel's service container, service providers, dependency injection, and the bootstrapping process behind the scenes.
5. Blade template
6. Middlewares and Laravel jobs implementation
7. Experienced in Storage Facade

React.js (Typescript)

1. Familiar with component-based development practices (Create modular and reusable components for maintainability)
2. State management (component state or global state) using useReducer, Context Api, useState and Redux for complex state handling
3. Strong understanding of component lifecycles
4. React Hooks (useEffect, useCallback, useMemo, etc.) for side effects and better performance optimization
5. Client-side routing with react-router-dom (dynamic routes, nested routes, etc.)

Next.js (Typescript) (App Router)

1. Familiar with it's file-based routing for creating dynamic, nested, and catch-all routes.
2. Strong understanding of server-side components and client-side components (use client).
3. Experienced with it's rendering strategies (SSG, SSR, ISR, etc.)
4. API Routes and middlewares implementation
5. next/image and module.css for asset optimizations

SOLO PROJECTS

Cloud-Based File Management System

Tech Stack: Laravel, MySQL, TypeScript, Vanilla JavaScript

- Upload files or entire folders directly from user devices to the platform
- View and manage uploaded files or folders within the web interface
- Set file access permissions — either public or restricted to specific users to protect sensitive data
- Track file history using version control (e.g., V1, V2, V3), and compare changes across versions
- Organize files and folders using drag-and-drop or cut-and-paste operations to move file around
- Copy and paste files to different folders for better file management
- Soft delete files and folders with a recycle bin for easy recovery
- Handle filename conflicts with prompt options: replace or create a new version (Windows-style behavior)
- Implemented storage tracking system which can prevent users from uploading files with size more than available storage

Social Media Web Application

Tech Stack: Next.js, TypeScript, Spring Boot, PostgreSQL

- Developed a full-stack social media web app and published to production with Render.com (<https://social-media-front-end-96v7.onrender.com/>)
- Users can create accounts and post contents with text, images, and videos
- Supports likes, comments, and adding friends for social interaction
- Includes a real-time chat system for direct messaging
- Users can customize their profile picture, background image and other profile details such as description, first and last name, gender, location, etc..
- Implemented lazy loads for scalability with nice content loading UI to ensure always give user feedback

Construction Clash Management System

Tech Stack: Laravel, MySQL, TypeScript, Vanilla JavaScript

- Developed a web-based Clash Management System integrated with a 3D building model viewer (Three.js) for tracking and resolving construction clashes
- Enabled users to add clashes by capturing the current 3D view as a screenshot and attaching detailed metadata (level, zone, tags, description)
- Implemented user assignment for each clash, allowing only designated users to update clash status and add resolution comments
- Designed a status-tracking system with lifecycle states: Active, Resolved, and Canceled, with deadline support per report
- Built functionality to group clashes into structured reports, which can be published and printed as professional PDFs (Using jsPDF.js)
- Generated clash reports with custom headers, project names, clash tables (jsPDF.js's Autotable plugin) including image, date, status, comments, and assignment info.
- Implemented permission-based access control for clash modification and status updates
- Streamlined clash handling and reporting workflows, improving coordination between project teams and stakeholders

PROFESSIONAL EXPERIENCE

Junior Software Developer (Full Time) | 2024 - NOW

Bimwedo Technology Sdn. Bhd. – Cyberjaya, Malaysia

Web Developer Intern | 2024

Bimwedo Technology Sdn. Bhd. – Cyberjaya, Malaysia
